

Individual Reflection 3

Julia Böckert

What do I want to learn or understand better?

I want to learn Python better and the web framework Flask - it is all new to me and I feel like there is a lot to tackle to be able to write good and functional code by myself.

How can I help someone else, or the entire team, to learn something new?

I can ask questions about the code and the framework that might help someone else that is equally confused. I can speak about the code in terms that everybody understands, as to not exclude anyone that might not have the same amount of experience within the subject.

What is my contribution towards the team's use of Scrum?

I have suggested user stories for the week's sprint and engaged in discussions about how we measure velocity and estimate a value of a user story.

What is my contribution towards the team's deliveries?

I have installed the framework and gotten comfortable with the new IDE, and gotten a better understanding of Python in general, so that I can build onwards next week.
